Burnout-As-A-Service: How to always deploy on a Friday

Do you drag yourself to work and have trouble getting started?

Have you lost patience with colleagues or clients?

Do you feel little satisfaction from what you accomplish?

Have your sleep habits changed or do you use food/alcohol to cope?

 I pre-convictions list

 ChatGPT 5 Thinking 

Using only our past chats, list 5 short 'I...' pre-convictions, both positive and negative, about my mind/body/wellbeing

Thought for 24s

Here are five "I..." pre-convictions I infer from our chats (mix of +/-):

1. I do my best work at a sustainable pace. (+)
2. I recharge through rest, boundaries, and small daily habits. (+)
3. I'm most alive when helping others grow. (+)
4. I push through fatigue and only notice burnout late. (-)
5. I tie my worth to output during big pushes. (-)

Description

Burnout is a syndrome conceptualized as resulting from chronic workplace stress that has not been successfully managed. It is characterised by three dimensions: 1) feelings of energy depletion or exhaustion; 2) increased mental distance from one's job, or feelings of negativism or cynicism related to one's job; and 3) a sense of ineffectiveness and lack of accomplishment. Burn-out refers specifically to phenomena in the occupational context and should not be applied to describe experiences in other areas of life.
