

Burnout-As-A-Service: How to always deploy on a Friday

Do you drag yourself to work and have trouble getting started?

Have you lost patience with colleagues or clients?

Do you feel little satisfaction from what you accomplish?

Have your sleep habits changed or do you use food/alcohol to cope?

**76% of employees feel burned out at
least sometimes**

 I pre-convictions list

 ChatGPT 5 Thinking 

Using only our past chats, list 5 short 'I...' pre-convictions, both positive and negative, about my mind/body/wellbeing

Thought for 24s

Here are five "I..." pre-convictions I infer from our chats (mix of +/-):

1. I do my best work at a sustainable pace. (+)
2. I recharge through rest, boundaries, and small daily habits. (+)
3. I'm most alive when helping others grow. (+)
4. I push through fatigue and only notice burnout late. (-)
5. I tie my worth to output during big pushes. (-)

Description

Burnout is a syndrome conceptualized as resulting from chronic workplace stress that has not been successfully managed. It is characterised by three dimensions: 1) feelings of energy depletion or exhaustion; 2) increased mental distance from one's job, or feelings of negativism or cynicism related to one's job; and 3) a sense of ineffectiveness and lack of accomplishment. Burn-out refers specifically to phenomena in the occupational context and should not be applied to describe experiences in other areas of life.

Exclusions

Adjustment disorder ([6B43](#))

Disorders specifically associated with stress ([6B40-6B4Z](#))

Anxiety or fear-related disorders ([6B00-6B0Z](#))

AI Doesn't Reduce Work— It Intensifies It

by Aruna Ranganathan and Xingqi Maggie Ye

February 9, 2026

"I end each day exhausted — not from the work itself, but from the managing of the work."

Francesco Bonacci,
AI Engineer

Configure Tools

☐ Select tools for this custom agent

The selected tools are configured by the 'demo-seed-reshape' tools will be applied to the custom agent file as well.

✓ ☐ Built-In

> ☐  Azure MCP

> ☐  Bicep

✓ ☒  burnout-app

✓  get_stress_score Get a quick stress score (0-100) based on your current workload.

✓  reshape_day AI-powered workload optimization that reshapes your day to reduce burnout.

✓  show_burnout_wheel Display an interactive flamegraph of your burnout levels.

✓  sync_issues Fetch open issues from GitHub and sync them with your local project.

> ☐  Foundry MCP

MCP App

show me the flamegraph with the mcp tool view in this chat

Checked available MCP tools for flamegraph visualization

Ran `show_burnout_wheel` – burnout-app (MCP Server) >

Here's the flamegraph structure directly from the MCP tool:

Agent Profile

Deployment status:

1. Pre-deploy checks passed
2. Azure deployment passed with azd up
3. Live endpoint resolved and healthy
4. Seed completed
5. Smoke test passed

Validation results:

1. Backend build: PASS
2. Backend tests: PASS
3. MCP app build: PASS
4. Azure deploy: PASS
5. Health endpoint: PASS (status UP)
6. Demo seed: PASS (16 chaotic issues, checkins, study snapshots)
7. Smoke test: PASS (27/27 assertions)
